

Qualitative data visualization

Factors driving the choice of type of graph or its building blocks

The graphical display of a categorical variable's levels frequencies will depend on the **number of levels** of interest and the **visual element** chosen to represent this frequency

Visual Element	1 Level of interest	>1 Level of interest
Portion of circle (> <u>Pie Chart Type</u> <)		
Bar Height (> Bar Plot Type <)		
Symbol along scale (> Dot Plot Type <)		

⊘ : avoid use

★ : recommended

Most often assembled into bar/dot plots displaying results for **several** categorical binary variables (as in this example for 8 AEs)
